Genes that fit *your* farm.

OAC Prudence Conventional Soybean

OAC Prudence is a 00.3 RM conventional soybean variety that is well-adapted to the Manitoba environment. Its maturity suits most of the soybean growing regions of the province and the strong agronomic traits have made it the conventional soybean of choice for many years.

Strengths:

- Tolerant rating to IDC
- True yellow hilum
- 2450 or 00.3 RM
- Stands well with medium-tall height
- Large seed
- High protein
- Quick emerging, vigorous seedling

Neutral Traits:

- Bushy or branchy canopy type

2018 Seed Manitoba – Western Manitoba Conventional Soybean Comparison (2017 Data)

Variety	Maturity Grouping	Long Term Average Yield	Relative Maturity (Days)	Hilum colour	IDC Rating (1-5)	IDC Grouping
AAC Halli	000.9	103	111	Y	2.3	Susceptible
AAC Edward	00.3	106	110	IY	1.8	Semi-Tolerant
Fjord	00.4	85	110	N/A	N/A	N/A
OAC Prudence	00.3	100	112	Y	1.6	Tolerant

2018 Seed Manitoba - Eastern Manitoba Conventional Soybean Comparison (2017 Data)

Variety	Maturity Grouping	Long Term Average Yield	Relative Maturity (Days)	Hilum Colour	IDC Rating (1-5)	IDC Grouping
AAC Halli	000.9	99	112	Y	2.3	Susceptible
AAC Edward	00.3	104	111	IY	1.8	Semi-Tolerant
Maxus	00.2	98	114	IY	2.2	Semi-Tolerant
OAC Prudence	00.3	100	114	Y	1.6	Tolerant
